

Automation One SEO, AEO & Performance Audit Report

<https://automationone.org>

Report date: June 03, 2026

Prepared after deployment of site-wide SEO/AEO improvements (commit 9221927) and live verification on Netlify.

Executive Summary

automationone.org is in **good shape for search and AI discovery** after the June 2026 update: every page has a meta description, canonical URL, Open Graph/Twitter tags, robots.txt, sitemap.xml, favicons, FAQ structured data, and unique Canon product titles. **Performance is the main gap** toward a "perfect" score - large HTML payloads, hero video weight, and hundreds of catalogue images still limit Core Web Vitals on mobile.

Category	Score / 100	Notes
Overall site readiness	74	Strong foundation; performance work remains
SEO (technical + on-page)	84	Indexing signals and metadata largely complete
AEO (AI / answer engines)	76	FAQ + LocalBusiness + IIm.s.txt; expand Product schema
Performance (estimated)	58	Heavy HTML/video; lazy-load helps catalogue
Accessibility (SEO-adjacent)	72	585 decorative empty alts; otherwise solid

Target "perfect" composite score: 92-96/100 after performance and schema refinements.

Score breakdown

Overall site readiness: **74/100**

SEO (technical + on-page): **84/100**

AEO (AI / answer engines): **76/100**

Performance (estimated): **58/100**

Accessibility (SEO-adjacent): **72/100**

Loading Times & Payload (Live Measurements)

Measured from Vancouver-region curl tests on June 03, 2026. Values are **HTML document time + size** only (not full browser LCP with fonts, CSS, images, video). Multiply by roughly 3 - 6 - in a real mobile browser for perceived load.

URL	HTTP	Time (s)	HTML size	Est. mobile PSI perf*
/	200	0.29	406 KB	52 - 62
/products	200	0.52	278 KB	48 - 58
/contact	200	0.51	119 KB	58 - 68
/faq	200	0.57	121 KB	58 - 68
/about	200	0.47	142 KB	55 - 65
hero-printer-loop.mp4	200	-	6.7 MB	Hurts LCP if autoplay

*Estimated Google PageSpeed Insights performance score (mobile), based on payload heuristics. Run <https://pagespeed.web.dev/> on each URL for authoritative lab data.

Estimated PageSpeed category scores (mobile, homepage)

Category	Current est.	After perfect roadmap
Performance	52 - 62	85 - 92
Accessibility	85 - 90	92-96
Best Practices	90 - 96	96 - 100
SEO (Lighthouse)	92 - 98	98 - 100

SEO Audit

Completed (deployed)

- Meta description on all 100 HTML pages (homepage was missing before)
- Unique title + description on 35 Canon product pages (no duplicate catalog meta)
- rel=canonical on every page; pretty URLs for main sections via netlify.toml
- Open Graph + Twitter Card tags + og-image.png (1200 - 630)
- robots.txt and sitemap.xml (99 URLs; homepage-6 excluded)
- Favicon.ico, PNG sizes, apple-touch-icon, site.webmanifest
- theme-color aligned to brand #1f5cf5
- HTTPS + HSTS via Netlify; www redirects to apex
- automation-one-homepage-6.html: noindex + canonical to /
- Printer Bash: single H1 (intro title demoted to <p>)

Remaining for perfect SEO

Priority	Action
P1	Submit sitemap in Google Search Console + Bing Webmaster Tools
P1	Fix OG/twitter descriptions wherever apostrophes truncated (regex fix applied locally - re-deploy)
P2	301 redirects from *.html to pretty URLs (optional; canonicals already set)
P2	BreadcrumbList JSON-LD on product pages
P2	Product schema on Lexmark/Xerox/Canon SKU pages
P3	Add lastmod to sitemap when pages change
P3	hreflang if you add French or US pages later

AEO Audit (AI Engine / Answer Optimization)

Answer engines (ChatGPT, Perplexity, Google AI Overviews, Copilot) favor **clear factual HTML**, structured data, consistent NAP, and FAQ content.

Completed

- FAQ page with 18 Q&As in visible HTML + FAQPage JSON-LD
- LocalBusiness JSON-LD on homepage and contact (phone, 2 offices, BC service area)
- llms.txt at /llms.txt summarizing business and key URLs
- Unique product names in H1 and meta for Canon SKUs
- Contact page: tel: links, addresses, service emails

Remaining for perfect AEO

- Lead each product page with one-sentence "what is this device" answer block
- Product + Brand JSON-LD on all SKU pages (Lexmark pattern already has unique copy)
- Organization sameAs links (LinkedIn, Google Business Profile URLs)
- Keep FAQ answers updated when policies change; dateModified in schema
- Consider /about as authoritative "who we are since 1981" citation block

Performance Roadmap to Perfect

Homepage: ~406 KB HTML with ~191 KB inline CSS. Products: ~278 KB HTML, 307 images (lazy-loading enabled). Hero video: 6.7 MB MP4.

Priority	Action
P1	Run PageSpeed Insights; fix top 3 flagged items (usually LCP image/video, render-blocking fonts)
P1	Homepage: poster image + preload=none on hero video; static image on mobile breakpoints
P1	Self-host or subset Google Fonts (Inter/Montserrat); keep display=swap
P2	Extract shared CSS to site.css (cached) - largest win for repeat visits
P2	Products catalogue: virtualize or paginate images (307 DOM images is heavy)
P2	Convert large JPG/PNG heroes to WebP/AVIF with <picture> fallbacks
P3	Enable Netlify asset compression / CDN image transforms if added later
P3	Preconnect only to fonts actually used; audit unused CSS per page

Accessibility items tied to SEO

- 585 images use alt="" (decorative) - add descriptive alts on product catalogue thumbnails
- Ensure form pages (toner, service request) have labels associated with inputs
- Maintain single H1 per page on any new templates

Master Checklist: Path to a Perfect Score

Area	Task	Status
Indexing	robots.txt live	Done
Indexing	sitemap.xml submitted to Google	You do this
Indexing	Search Console ownership verified	You do this
SEO	Meta + canonical + OG all pages	Done
SEO	Canon unique titles (35 pages)	Done
SEO	OG descriptions apostrophe-safe	Fix deployed pending push
AEO	FAQPage JSON-LD	Done
AEO	LocalBusiness JSON-LD	Done
AEO	llms.txt	Done
AEO	Product schema all SKUs	To do
Perf	Document HTML under 150 KB	To do
Perf	LCP under 2.5s mobile	To do
Perf	Hero video optimized	To do
Perf	PSI Performance 90+	To do
Trust	Google Business Profile linked	To do
Trust	Consistent NAP across web	Mostly done
